THEREMIN
PROJECT RESURRECTION

LEON THEREMIN

Early life Invention

- Born in 1896 in Saint Petersburg, Russia.
- A physicist, inventor and musician.
- Invented the Theremin around 1920.
- Initially developed it while researching electronic circuits.

His Legacy

- Patented the instrument in 1928
- Introduced a new way of producing music electronically
- Influenced the development of electronic musical instruments
- His invention remains one of the earliest electronic instruments

The Theremin

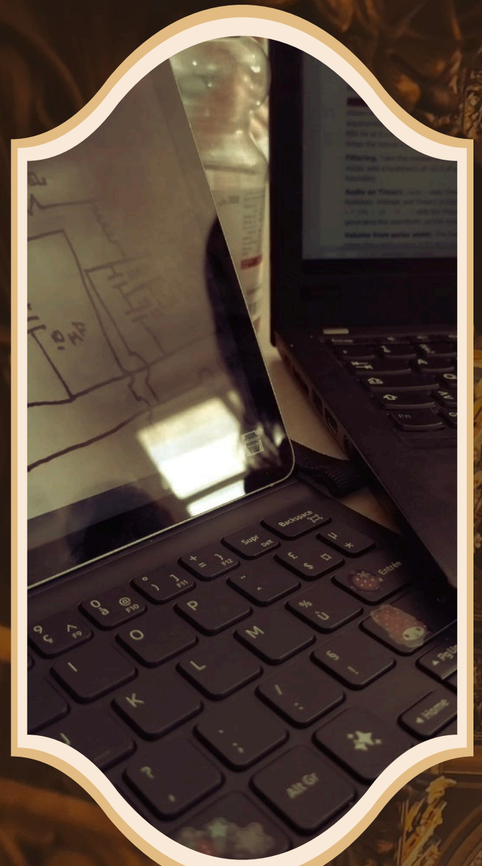

Now, let's look at how the **Theremin** actually works:

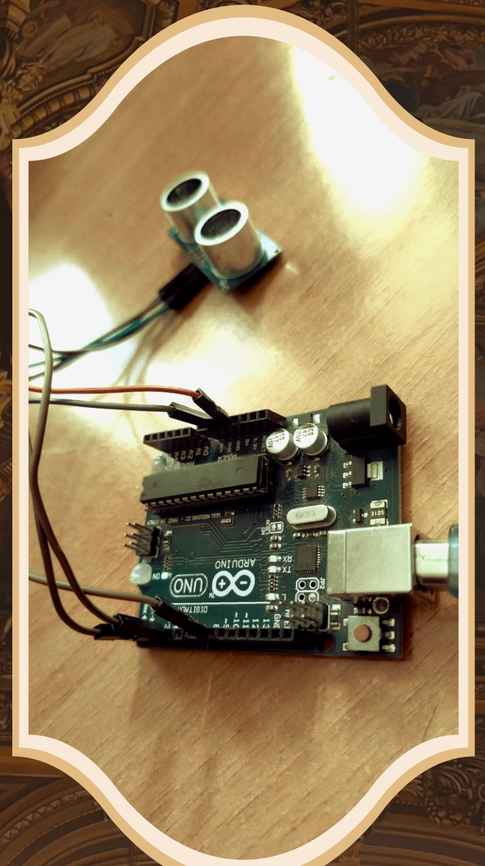

The instrument has two ULTRASONICS. One controls the pitch, while the other controls the volume.

When the musician moves their hands closer to or further from the ULTRASONICS, the instrument detects changes in the surrounding electromagnetic fileds.
